The Smarter Way to Manage Employee Time & Attendance

ATOM 3.0 is a precise and automatic method for tracking employee / contractor labor hours using event data from your existing database. ATOM 3.0 provides managers with real-time reporting along with historical views of employee and contractor attendance. ATOM 3.0 eliminates the need for manual data entry, chasing down missing timecards or waiting for labor costs. Timesheets are automatically sent by ATOM to the appropriate individuals for revision and approval thus eliminating the delay in their receipt and impact on payroll. This web-based system allows any approved employee to access the system to check real time cost and hours.

ATOM 3.0 is now configured with HID brand of attendance card readers, but can be integrated with any other brand of card reading systems.

Example of a Cost Report

FEATURES

- ▶ Automatic emailing of timesheets
- ▶ Track time & attendance as it happens in real-time
- ▶ Designed for both fixed locations and mobile crews
- ▶ Direct data feed to invoicing system (SAP)
- ▶ Custom reports available on request

Revolutionary Portable System

ATOM PTK is Toadfly's own portable timekeeping system based on ATOM 3.0. ATOM PTK is the perfect solution for remote/temporary locations where a timekeeping system is needed, but a permanent system is not necessarily required at that point in time. Not only does this provide a flexible and efficient solution, but also a much more affordable option compared to other alternatives.

How does ATOM PTK work?

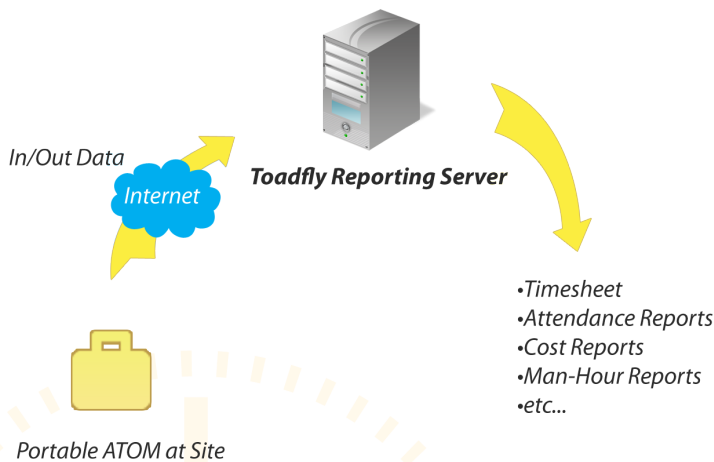

ATOM PTK is our very own design that uses a lightweight and portable case which can be carried easily within a job site. Employees and contractors can badge in/out by swiping their cards by the sides of the PTK, at which point the data is sent to the Toadfly servers through an Internet connection. From there, managers can access the ATOM web application and look at real-time punches, timesheets, attendance, reports, cost reports, man-hour reports, etc.

ATOM PTK unit out in the field
